

Brainstorming & Idea Prioritization Template

Ideation Phase

Author: **KADALI GEETHA SRAVYA** | Team ID: **PNT2025TMID_COSMETICS_01**

1. Executive Summary & Brainstorming Purpose

This document outlines the ideation and brainstorming session conducted for the project 'Cosmetic Insights: Navigating Cosmetics Trends and Consumer Behavior with Tableau', authored by KADALI GEETHA SRAVYA.

The core goal is to leverage data analytics and Tableau visualization to decode market trends, skin-type suitability, and pricing patterns across 1,472 cosmetic items.

2. Idea Generation & Categorization

The team identified 4 key analytical dimensions:

- **Category-Level Product Distribution:** Analyzing how cleansers, moisturizers, masks, and treatments are distributed.
- **Skin-Type Coverage:** Computing suitability metrics for Combination, Dry, Normal, Oily, and Sensitive skin.
- **Pricing & Luxury Segmentation:** Evaluating average price points by brand and product type.
- **Universal Products Identification:** Tracking items that fulfill all 5 skin-type criteria simultaneously.

3. Prioritization Matrix & Final Decision

Based on feasibility, impact, and dataset dimensions, the team prioritized building an interactive Tableau Dashboard & Story embedded within a web application interface.
